                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    셤
UNALIZATE DAMES (EC 3.2.1.41) precursor - yeast (Lipomyces kononenkoae)

NALerrate names : Lixth protein; raw starch-degrading amylase
Ny.Alerrate names : Lixth protein; raw starch-degrading amylase
Ny.Contains: alpha-dextrin endo-1,6-alpha-glucosidase (EC 3.2.1.41)
C.Species: Lipomyces kononenkoae: dealpha-glucosidase (EC 3.2.1.41)
C.Species: Lipomyces kononenkoae: dealpha-glucosidase (EC 3.2.1.41)
C.Species: Lipomyces kononenkoae: voision 21-Aug-1996 #text_change 09-Jul-2004
C.Accession: UG4510; PC4116
R.Steyn, A.J.C.; Marmur, J.; Pretorius, I.S.
Gene 166, 65-71, 1995
A.Title: Clohing; sequence analysis and expression in yeasts of a cDNA containing a Lipomyces on the containing a Lipomyces and the containing both alpha-1,4 and alpha-1,6 linkages hydomin: signal sequence #status predicted *AiGone: Lixth C.Function:
A.Description: hydrolyzes raw starch, degrading both alpha-1,4 and alpha-1,6 linkages A.Pentition: hydrolyzes alpha-amylase; alpha-amylase core homology second starch degradation of Superfamily: Lipomyces alpha-amylase status predicted *AiGone: Lixth C.Function:
A.Description: signal sequence #status predicted *AiGone: Lixth C.Function:
A.Description: signal sequence #status predicted *AiGone: P. 29-64 Product: alpha-amylase starch-binding domain homology *AMY.
F.29-64 Product: alpha-amylase starch-binding domain homology *AMY.
F.29-64 Production: alpha-amylase starch-binding domain homology *AMY.
F.20-64 Production: alpha-amylase starch-binding domain homology *AMY.
F.20-64 Production: alpha-amylase starch-binding domain homology *AMY.

Royer T.J., Thompson S.A., Ward M., Wilson L.J., Berka R.M.;
"Cloning, characterization, and expression of two alpha-amylase genes
from Aspergillus niger var. awamori.";
Curr. Genet. 17:203-212(1990).
-!- CATALYTIC ACTIVITY: Endohydrolysis of 1,4-alpha-glucosidic
linkages in oligosaccharides and polysaccharides.
-!- COPACTOR: Binds 2 calcium ions per subunit. Calcium is inhibitory
at high concentrations (By similarity).
-!- SIMILARITY: Belongs to the glycosyl hydrolase 13 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            metabolism; Glycoprotein; Glycosidase;

         at high concentrations.

1- SUBUNIT: Monomer.

1- SUBUNIT: Monomer.

1- SUBUNIT: Monomer.

1- SIBUNIT: Monomer.

1- SIBUNITARITY: Belongs to the glycosyl hydrolase 13 family.
COFACTOR: Binds 2 calcium ions per subunit. Calcium is inhibitory

"Cloning of the alpha-amylase cDNA of Aspergillus shirousamii and its
"Cloning of the alpha-amylase cDNA of Aspergillus shirousamii and its
expression in Saccharomyces cerevisiae.";
Biosci. Biotechnol. Biochem. 56:174-179(1992).
-!- CATALYTIC ACTIVITY: Endohydrolysis of 1,4-alpha-glucosidic
linkages in oligosaccharides and polysaccharides.
-!- COFACTOR: Binda 2 calcium ions per subunit. Calcium is inhibitory
at high concentrations (By similarity).
-!- SIMILARITY: Belongs to the glycosyl hydrolase 13 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        similarity).

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 2, April Sequence 10, 7 Sequence 10, 7

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 5, A

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 7, Ag

A;Cross-references: UNIPROT:002906
C;Function:
A;Description: catalyzes the hydrolysis of internal 1,4-alpha-D-glucosidic bonds
A;Pescription: catalyzes the degradation
C;Superfamily: Aspergillus alpha-amylase; alpha-amylase core homology
C;Keywords: glycoprotein; glycosidase; hydrolase; polysaccharide degradation
F;194-321/Domain: alpha-amylase core homology <AMY>
